

Business Requirements Document (BRD)

1. Project Title

Apple Retail Sales & Warranty Analytics Dashboard

2. Project Objective

The objective of this project is to design and develop an interactive Power BI dashboard that provides end-to-end visibility into Apple retail sales performance, product trends, store efficiency, and warranty claim behavior. The dashboard will support data-driven decision-making for sales optimization, inventory planning, and customer service improvement.

3. Business Problem / Opportunity

Apple operates across multiple regions, product categories, and retail stores. Currently, decision-makers lack a consolidated view to:

- Monitor overall sales and revenue trends
- Identify top and low-performing products and stores
- Analyze regional performance differences
- Track warranty claims and repair status patterns

This analysis helps uncover growth opportunities, reduce warranty costs, and improve operational efficiency.

4. Target Audience

- Senior Management / Executives
- Sales & Marketing Teams
- Store Operations Managers
- Product & Warranty Support Teams

5. Scope

In Scope:

- Sales performance analysis (Revenue, Quantity, Orders)
- Product and category-level insights
- Store and regional performance analysis
- Warranty claims and repair status analysis
- Interactive dashboards with filters, drill-downs, tooltips, and bookmarks

Out of Scope:

- Real-time data integration
- Predictive analytics or forecasting

- External competitor analysis

6. Data Source(s)

- Source: Provided retail sales dataset (Apple Retail Sales)
- Type: Structured transactional data
- Tables: Sales, Products, Categories, Stores, Warranty Claims
- Time Period: 2020–2024

7. Key Metrics / KPIs

- Total Revenue
- Total Quantity Sold
- Total Orders
- Average Order Value (AOV)
- Total Stores
- Revenue by Category, Product, Region, Store
- Warranty Claim Count
- Warranty Claim Rate
- Repair Status Counts (Completed, In Progress, Pending, Rejected)

8. Deliverables

- Power BI Interactive Dashboard (5 pages)
- Business Requirements Document (BRD)
- Functional Requirements Document (FRD)
- Data Model & Relationships
- KPI Definitions & DAX Measures

9. Timeline / Milestones (5 Days)

- Day 1: Data understanding & modeling
- Day 2: KPI creation & DAX calculations
- Day 3: Dashboard layout & visuals
- Day 4: Interactivity (filters, drill-downs, bookmarks)
- Day 5: Final review & documentation

10. Notes / Assumptions

- Data is assumed to be accurate and complete
- Revenue is calculated as Quantity × Price
- Warranty claims are linked to completed sales
- Currency values are standardized across regions
